Regulators want numbers. Companies can't produce them.

Regulation is arriving fast

CSRD is live in the EU. TCFD is mandatory in the UK. IFRS S2 is being adopted across 40+ jurisdictions. Every major financial regulator is asking companies one question: what is climate change going to do to your balance sheet?

The answer doesn't exist yet

Most companies today respond with a PDF template, a consultancy engagement that takes 6 months and costs six figures, or a heat map with traffic lights. None of these satisfy a regulator or an auditor asking for dollar figures.

Existing tools don't solve it

MSCI ESG and Sustainalytics provide portfolio screening scores, not asset-level financial numbers. A brewery and a cement plant in the same location get the same water stress score. That is not good enough for CSRD filing.

50,000+

Large companies in scope for CSRD filings in Europe alone

\$2.4B

Projected global climate risk analytics market by 2028
(CAGR 28%, driven by mandatory disclosure)

Primary targets: sustainability consultancies (800+ in NL/EU), PE/asset managers, large corporates with CSRD obligations, banks running climate stress tests.

CSRD Filing Deadlines

2025

Large listed companies (500+ employees)

2026

All large EU companies (250+ employees)

2027

Listed SMEs, non-EU companies with EU revenue

2028

Non-EU companies with EU subsidiaries/branches

Window is open now — and growing each year.

ClimRisk CRI Engine

From raw data to a completed regulatory filing in 24–48 hours.

01

Physical Risk

Capital-at-Risk in USD

- 10 hazard types: flood, heat, cyclone, drought, wildfire, sea level rise and more
- IPCC AR6 warming amplification per SSP scenario and year
- 16 sector-specific multipliers — a brewery and a cement plant get different scores in the same location
- GPS-resolved to 25km grid, asset by asset

02

Transition Risk

EBITDA and Enterprise Value impact

- Scope 1/2/3 emissions mapped to NGFS Phase 4 carbon price pathways
- Net Zero 2050, Delayed Transition, Current Policies
- DCF model: carbon cost reducing EBITDA each year 2026 to 2050
- Climate-adjusted WACC premium by sector

03

Disclosure Output

Pre-filled, audit-ready

- TCFD four-pillar structure fully populated
- IFRS S2 quantitative metrics pre-calculated
- CSRD / ESRS E1 with double materiality matrix
- BRSR Core (SEBI) for Indian filers
- Every field traceable to its source

Sector-specific hazard intelligence. Same location, completely different risk.

Water Stress Score — Same GPS Coordinates

Why the scores differ — sector multipliers

Sector	Water Stress	Why
Food & Beverage	×2.8	3–7 L water per L product
Steel & Metals	×1.8	95 L per tonne of crude steel
Cement	×0.65	Kilns recycle process water
Energy / Utilities	×2.5	40–50 L per kWh for cooling
Real Estate	×1.2	Indirect — insurance/value erosion
Agriculture	×3.2	Direct crop yield dependency

16 sectors profiled. Every multiplier sourced from CDP, WRI, IEA or sector industry body publications.

COMPETITIVE LANDSCAPE

	MSCI / Sustainalytics	Consultancies	ClimRisk CRI
Asset-level physical CaR (\$)	No	Manual, expensive	Automated
Sector-specific hazard multipliers	No	Varies	Yes — 16 sectors
NGFS carbon price scenarios	Partial	Manual	Yes — Phase 4
Automated disclosure output	No	No	Yes — TCFD/IFRS/CSRD
Auditable, traceable methodology	Proprietary	Varies	Full audit trail
Time to result	Days	6–12 weeks	24–48 hours
Cost per assessment	High SaaS	€50k–€150k	Fraction of cost

BUSINESS MODEL

FIRST REVENUE

White-Label Report

€4,000 / company

Sustainability consultancies buy a CRI assessment, deliver it to their client under their brand, and keep the margin. Morelli Consulting (UK) is the active pilot. The consultancy already has the client trust — we provide the output.

RECURRING

SaaS Platform

€2,000 / month

In-house sustainability managers at mid-large companies who own their CSRD filing and need audit-ready outputs year-round. Includes unlimited re-runs, scenario updates, and live regulatory monitoring — replacing an annual consulting retainer.

ENTERPRISE

Portfolio Screening

€4,000 / entity

Banks and asset managers screening portfolios for physical and transition risk exposure. 30 portfolio companies = €120,000 — directly competitive with Jupiter Intelligence and Moody's Climate, at a fraction of the onboarding time.

Go-to-market entry: white-label resellers. They bring the client trust. We deliver the compliance output.

Where We Are

- Platform live at climrisk.io — publicly accessible, no login required
- Full methodology documentation completed (CRI_Methodology_v1.pdf)
- Pilot engagement active with Morelli Consulting, UK-based sustainability advisory
- Incorporated in Netherlands — KVK 95420134, BTW NL004902017B42
- 16 sector profiles calibrated from CDP, WRI, IEA and industry body publications
- TCFD, IFRS S2, CSRD/ESRS E1, BRSR disclosure outputs implemented and tested

Next 12 Months

Q3 2026

Land first two paid pilot clients. Founder relocates to Rotterdam on startup visa.

Q4 2026

Launch SaaS subscription tier. First white-label API conversation with a consultancy.

Q1 2027

TNFD nature-related risk layer in beta. Real-time asset registry sync.

Q2 2027

10 paying customers. Seed round to fund engineering hire and enterprise sales.

THE FOUNDER

Shrinivash Dhamodhara Kannan

Founder & CEO · ISO 14067 Climate Risk Analyst & Auditor

ClimRisk

Founder & CEO · Apr 2026 – Present

Built the CRI Engine from scratch: physical and transition risk modelling, NGFS carbon pathways, automated TCFD/IFRS S2/CSRD disclosure output. Incorporated in the Netherlands.

Erasmus University Rotterdam

MSc Urban Management · Sep 2023 – Sep 2024

Specialisation in Urban Environment, Sustainability and Climate Change. Built the academic foundation for climate-financial risk quantification and the Dutch ecosystem network.

The Ramco Cements Limited

Graduate Engineer Trainee · Dec 2020 – May 2023

Architected Scope 1–3 GHG inventories across 4 manufacturing facilities. 450,000 tCO₂e quantified annually with 95% third-party verification accuracy, zero non-conformances. Led \$50M capital allocation case for alternative fuels.

Habitat Forum INHAF

Project Lead, Climate Change · Oct 2025 – Present

Built climate risk model translating hazard exposure to financial stress indicators across 5 urban sectors. Contributed to €8M in municipal climate adaptation funding.

WHY THE NETHERLANDS

This is not a default choice. The Netherlands is where the market, the science and my network converge.

The Client Base

ING, Shell, LyondellBasell, DSM-Firmenich, Heineken, BASF European operations. All face mandatory CSRD filings. All need the numbers CRI produces. Rotterdam port, chemicals and energy clusters carry some of the highest physical climate exposure in Europe.

Personal Connection

MSc at Erasmus University Rotterdam. Worked in Rotterdam at Flink after graduating. Dutch phone number still active (+31 647 140 567). ClimRisk B.V. incorporated here: KVK 95420134, BTW NL004902017B42.

Research Ecosystem

TU Delft Climate Institute and Deltares are global leaders in flood risk and physical climate modelling — the exact domain CRI's physical hazard layer draws on. These are natural validation partners.

Consultancy Market

The Netherlands has 800+ sustainability consultancies. Most advise on CSRD and TCFD without a quantitative modelling engine. CRI is designed to sit behind an advisory practice as a white-label platform.

Realistic outcomes across the next 18 months — built on what already exists.

Months 1 - 3

First Paying Client

- Close pilot assessment with an active CSRD-obligated corporate or consultancy
- Deliver full physical + transition risk output plus completed disclosure template
- Validate that CRI output meets audit-ready standard in real advisory context
- Collect structured feedback to prioritise the product development backlog

Months 3 - 9

Commercial Foundation

- 3 paying clients across at least 2 segments (corporate + consultancy)
- One white-label API conversation in active negotiation with a sustainability advisory firm
- SaaS subscription tier launched with monthly billing and self-serve onboarding
- TNFD nature-related risk layer in beta — expands addressable scope beyond CSRD

Months 9 - 18

Scale-Ready

- 5 to 8 paying clients generating repeatable monthly revenue
- White-label partnership live with at least one consultancy embedding CRI in their practice
- Real-time asset registry sync and API enterprise tier operational
- Methodology independently validated through academic or research partnership

The thesis: The regulatory deadline is fixed. The market is live right now. CRI is already built and running. The next 18 months is about proving the commercial model — not the technology.

ClimRisk

Turning climate science into capital decisions.
